# KUBER JHA

AI & Tech Lead · Product, Full-Stack & Mobile Engineering

Chandigarh, India · kuber98jha@gmail.com · linkedin.com/in/kuberjha25 · github.com/kuberjha25 · kuberjha.com

## PROFESSIONAL PROFILE

Technology leader and hands-on engineer with five-plus years of end-to-end ownership over production systems, now responsible for AI, product and software development together at Chaupal, a regional OTT platform. Combines a full-stack and mobile foundation (React Native, native Android, React.js, Next.js, Java Spring Boot, Node.js, .NET) with practical AI delivery: retrieval-augmented generation pipelines, conversational assistants, AI-driven customer support and fully automated quality assurance that tests websites and apps unattended and produces its own reports.

Built for organisations that need one accountable person to run AI and technology end to end: identifies manual processes, automates them, writes the specification, ships the code and reports progress to leadership. Prior impact includes a 45% reduction in cold-start latency and a 50% contraction of production bundle size on a fintech application, a digital-gold trading platform serving 50,000+ active users, a geofencing-based field-auditing system deployed to 1,000+ auditors, and a client engagement that culminated in a direct full-time appointment.

## CORE COMPETENCIES

- **AI strategy and automation** — identifying manual workflows and replacing them with LLM-driven systems: assistants, customer support, internal operations
- **LLM integration** — retrieval-augmented generation, chatbot architecture, OpenAI / Gemini / Anthropic APIs
- **QA automation** — autonomous testing of websites and mobile apps with self-generated reports
- **Product ownership** — roadmap, specifications and prioritisation; bridging engineering, product and business
- **Technical leadership** — stakeholder management, leadership reporting, engineering mentorship
- **Cross-platform mobile architecture** — React Native CLI and Expo, native Android, iOS; bundle optimisation, code splitting, cold-start reduction
- **Full-stack web development** — MERN, Next.js, Java Spring Boot, .NET
- **Fintech integrations** — UPI, prepaid instruments, multi-gateway payment orchestration, KYC and compliance workflows
- **Real-time and location services** — geofencing, background location, WebRTC, EnableX; offline-first architecture
- **Cloud infrastructure and deployment** — AWS server management; build, back-end development and production deployment handled end to end by one person
- **Release management** — complete Play Store and App Store lifecycle ownership

## TECHNICAL PROFICIENCIES

| | |
|---|---|
| **Languages** | JavaScript (ES2015+), TypeScript, Java, C#, SQL, HTML5, CSS3 |
| **AI / LLM** | LLM API integration (OpenAI, Google Gemini, Anthropic Claude), retrieval-augmented generation (RAG) pipelines, chatbot and conversational-assistant architecture |
| **AI Automation & QA** | AI personal assistants, AI-driven customer support, automated end-to-end testing of web and mobile applications with auto-generated test reports |
| **Product & Delivery** | Roadmapping, specification authorship, prioritisation, stakeholder reporting, Jira, Figma |
| **Front-End** | React.js, Next.js 14, Redux Toolkit, Tailwind CSS, Material UI, Vite |
| **Mobile** | React Native (CLI & Expo, Expo Router), native Android (Android Studio, native modules), iOS, Play Store & App Store release management |
| **Back-End & APIs** | Java Spring Boot, Node.js, Express.js, .NET / C#, RESTful API design, JWT authentication |
| **Databases** | MongoDB, PostgreSQL, MySQL, Microsoft SQL Server, SQLite, Firebase |
| **Cloud & DevOps** | AWS (server management and deployment), Docker, Git & GitHub, Netlify |
| **Integrations & SDKs** | UPI and payment-gateway APIs, geofencing and background-location APIs, WebRTC, EnableX (video/audio), Gamezop APIs |

## PROFESSIONAL EXPERIENCE

### AI & Tech Assistant Manager
**May 2026 – Present**

*Chaupal*

*Regional OTT platform. A hybrid mandate uniting hands-on engineering with ownership of AI, product and software development.*

- Own three functions at once: AI, product and software development. Serve as the single accountable lead from idea and specification through build, release and measurement.
- Architected and delivered chatbot and retrieval-augmented-generation features on the Chaupal platform utilising Gemini and OpenAI models, stewarding each initiative from technical design through production deployment.
- Automated customer support with AI, materially alleviating the manual support burden, and built an AI personal assistant that takes over routine day-to-day operational tasks.
- Introduced automated quality assurance: websites and apps are now tested without manual effort and the test reports are generated automatically, replacing manual regression checks.
- Define the product roadmap, author specifications, adjudicate implementation approaches and furnish progress reporting to leadership, whilst retaining direct, hands-on ownership of the codebase.
- Continue to own and extend the MERN-based product website, partner portal and referral system originally delivered as a client engagement (March 2024 onward), now augmenting it with AI-assisted functionality.
- Build and maintain the Chaupal Shop commerce storefront and its Next.js administrative console.
- Manage the AWS server infrastructure, build new websites and apps from scratch, develop their back-ends and deploy them independently, end to end, with no hand-off to a separate DevOps team.

**Technologies:** Gemini API, OpenAI API, RAG, automated testing, AWS, React.js, Next.js, Node.js, Express.js, MongoDB, Java Spring Boot, Microsoft SQL Server

### AI & Tech Lead (promoted from Full-Stack & React Native Developer)
**Mar 2024 – May 2026**

*Paul Merchants Limited · Chandigarh, India*

*Diversified financial-services group spanning forex, remittances, digital gold and prepaid instruments. Owned the mobile client and several full-stack products end-to-end.*

- Promoted from Full-Stack & React Native Developer to AI & Tech Lead, widening the remit from hands-on delivery to AI and technical leadership across the group's products.
- Spearheaded the migration of the Mayaa Money application from Expo to React Native CLI, instituting code splitting and lazy loading that curtailed cold-start time by 45%, as instrumented through Firebase.
- Compressed production bundle size by 50% on both platforms (iOS from 100 MB to 50 MB; Android from 60 MB to 30 MB) through tree-shaking, image optimisation and dynamic imports.
- Architected and shipped Paul Gold's B2C mobile application alongside its B2B administrative and partner portals for digital gold, silver and platinum trading to a base of 50,000+ active users, owning the mobile client from architecture through store release.
- Engineered the MERN-based product website, partner portal and referral system for Chaupal OTT (React.js, Spring Boot, MSSQL) as a client engagement of sufficient calibre that the client subsequently extended a direct full-time appointment.
- Integrated fintech modules encompassing prepaid cards, UPI via PaulPay and Gamezop gamification APIs, complemented by granular event tracking for transaction and engagement analytics.
- Constructed a travel-compliance monitoring system incorporating EnableX video/audio for remote audit verification, diminishing audit discrepancies by 35% by supplanting manual paper-trail checks with recorded verification.
- Assumed ownership of .NET/C# back-end maintenance for the RADS project (client: Bell Canada) and served as interim client point of contact during a project-management staffing gap.
- Managed AWS servers and independently built new websites and apps, including their back-ends, and deployed them to production end to end.
- Mentored two interns in React Native architecture and production release workflows; both were converted to full-time hires.

**Technologies:** React Native (CLI & Expo), React.js, Node.js, Java Spring Boot, .NET / C#, Microsoft SQL Server, MongoDB, Firebase, AWS, EnableX, UPI and payment APIs

### Frontend & Android Developer — 2023 – 2024

*Retail Scan Management Services · Mumbai, India*

*Retail-audit and merchandising-intelligence company serving consumer-goods brands.*

- Developed the RetailScan B2B web portal (React.js) with role-based dashboards for retail auditors, abbreviating audit turnaround time by 30% by displacing spreadsheet-based reporting with live dashboards.
- Built MyTrack, an offline-first native Android auditing application (Android Studio) featuring local persistence with automatic synchronisation upon reconnection, thereby enabling audits in low-connectivity zones.
- Migrated the EzeePay Android application to React Native within a compressed two-month deadline.
- Designed the auditor payment and reward-tracking system.

**Technologies:** React.js, native Android (Android Studio), React Native, SQLite, REST APIs

### Software & Applications Development Engineer — Aug 2021 – Jul 2023

*Tata Communications · Mumbai, India · Promoted within six months*

*Global digital-infrastructure provider; enterprise field-operations and workforce-management tooling.*

- Designed and led the geofencing-based field-auditing system for the SRMS project, encompassing real-time location tracking, background speed monitoring and remote-location alerts, deployed to 1,000+ field auditors.
- Built the WFM (workforce-management) mobile application end-to-end: Spring Boot back-end, React.js web front-end and React Native mobile client, implementing conditional rendering and dynamic login switching.
- Independently administered Play Store and App Store release cycles for the WFM application.
- Earned promotion within six months of joining in recognition of delivery velocity and technical ownership.

**Technologies:** React Native, React.js, Java Spring Boot, geofencing and background-location APIs, Play Store and App Store release management

### Java Spring Boot Intern — Jan 2021 – Aug 2021

*Cuemath · Bangalore, India*

- Developed back-end services in Java Spring Boot, contributing to production API endpoints and performance-optimisation work under senior-engineer review.

## SELECTED PROJECTS — PRODUCTION & CLIENT

**Paul Gold — Digital Gold, Silver & Platinum Trading Platform** *Paul Merchants Limited · Production*

Flagship fintech platform enabling retail customers to buy and sell digital precious metals at live market prices, comprising a React Native CLI application (with Expo iterations), a React.js administrative dashboard and Node.js services. Encompasses KYC verification and compliance workflows, multi-gateway payment routing and automated transaction reconciliation. Serves 50,000+ active users.

**Stack:** React Native CLI, Expo, React.js, Node.js, Express.js, MongoDB, PostgreSQL, Redis, Docker, AWS, payment gateways (Juspay, PayU, Stripe), banking APIs (Yes Bank, HDFC)

**DigiWallet — Enterprise Wallet Management System** *Employer project · Production*

Enterprise-grade digital wallet comprising an administrative portal for user, transaction and settlement management, and a customer mobile application supporting wallet top-ups through multiple payment gateways, QR-code peer-to-peer payments, transfers and transaction history. Built on Java Spring Boot REST services with JWT authentication over Microsoft SQL Server, a React.js + Vite administrative portal and a React Native client, containerised with Docker on AWS ECS.

**Stack:** Java, Spring Boot, Microsoft SQL Server, React.js, Vite, React Native, JWT, Redis, Kafka, Docker, AWS ECS

**Valuefin Desk — NBFC Lending-Operations System** *Client project*

Internal lending-operations platform for a non-banking financial company: borrowers, drawdowns and payments flow in; ledger, MIS, ageing and IRR analytics flow out. Incorporates a director-level document-approval workflow, role-based access control (Director / Manager / Credit Analyst), bcrypt-hashed credentials and an append-only audit trail recording every state change.

**Stack:** React 18, Vite, Tailwind CSS, Node.js, Express.js, MySQL

**Meraqui — Channel-Partner & Sales CRM Mobile App** *Gilco Group · Client project*

Cross-platform CRM application for Gilco Group's Meraqui brand, delivered from a sixteen-module functional specification and a thirty-seven-screen design reference set. Runs on iOS, Android and Web from a single Expo Router codebase, with OTP-based authentication and brand-book-driven theming.

**Stack:** React Native, Expo, Expo Router, TypeScript

**react-native-camera-core — Open-Source Library** *Open source · MIT licence*
Authored an open-source React Native library consolidating camera capabilities behind a single native module for iOS and Android, scaffolded with create-react-native-library (Builder Bob).
**Stack:** React Native, native modules (iOS / Android), TypeScript

## INDEPENDENT & EXPLORATORY PROJECTS

**WheelDeal — B2B Car-Rental Marketplace** *Independent project*
MERN-stack marketplace connecting fleet owners with renters through distinct administrative, business and customer portals, featuring a real-time availability calendar, demand-responsive dynamic pricing, Stripe payments, Google Maps location search and Socket.io-driven notifications.
**Stack:** MongoDB, Express.js, React.js, Node.js, Material UI, JWT, Stripe, Google Maps API, Socket.io, Redis, Nginx

**MediCare Pro — Clinic Appointment & Records Platform** *Independent project*
White-label healthcare product pairing a React Native patient application with a React.js clinic dashboard: multi-role access control (administrator, doctor, patient, receptionist), appointment scheduling, digital prescriptions with e-signature, video consultations, multi-channel reminders and billing.
**Stack:** MongoDB, Express.js, React.js, React Native, Node.js, Tailwind CSS, Socket.io, JWT, Agora SDK, Twilio, Redis

**ReelSync — Short-Form Video Application** *Exploratory project*
React Native exploration of native-module integration for video: custom modules in Java, Kotlin and Swift for compression, trimming and hardware-accelerated playback, an HLS infinite-scroll feed and resumable background uploads.
**Stack:** React Native CLI, native modules (Java, Kotlin, Swift), Redux Toolkit, FFmpeg, Firebase

## EDUCATION

**Bachelor of Engineering, Computer Science Engineering** **2017 – 2021**
*Chitkara University · Himachal Pradesh, India*

## LANGUAGES

**English** — Fluent · **Hindi** — Native
